Beach Advisory Issued for Driftwood Beach on Jekyll Island

GLYNN COUNTY, GA – The Glynn County Health Department has issued a swimming advisory for Driftwood Beach, which is from Beach KM marker 1 to Tallu Fish Lane on Jekyll Island.

This advisory is based on results from routine, weekly water sample tests for bacteria found in humans and some wildlife, and this testing program is not related to the capsized cargo carrier in St. Simons Sound. The Department of Natural Resources Coastal Resources Division tests water on St. Simons and Jekyll Islands every week of the year, screening for enterococcus (pronounced: en-ter-o-coc-cus) bacteria. When a beach is under advisory, it means that the level of bacteria found in the water is above the Environmental Protection Agency's (EPA) recommended standards. This does NOT mean the beach is closed.

Periodic advisories are not unusual, particularly during warmer months when bacteria thrive. It is difficult to determine exactly where the bacteria come from, but some sources could include animal waste, storm water runoff, or boating waste.

This beach water advisory is to alert the public of a possible risk of illness associated with water contact in the advisory area. The Health Department recommends you do not swim or wade in the water in the area under advisory. No other beach areas are affected. Fish and other seafood caught from this area should be thoroughly washed with fresh water and thoroughly cooked before eating, as should fish or seafood caught from any waters.

The area will be re-tested this week, and the advisory will be lifted when the bacteria levels meet the EPA's recommended standards. For more information about beach water testing, go to GaCHD.org and click on the Environmental Health tab at the top of the page.
