Beach Advisories Issued for Jekyll and St. Simons Islands

GLYNN COUNTY, GA – The Glynn County Health Department has issued two beach water advisories. The affected areas are:

- South Beach at the Lighthouse - 9th Street to the Pier on St. Simons Island, and
- Driftwood Beach - Beach KM Marker 1 to Tallu Fish Lane on Jekyll Island.

The Department of Natural Resources - Coastal Resources Division tests water samples on Glynn County beaches throughout the year. The tests screen for enterococcus (pronounced: en-ter-o-coc-cus) bacteria, which are found in humans and some wildlife.

When a beach is under advisory, it means the level of bacteria found in the water is above the Environmental Protection Agency's (EPA) recommended standards. This does NOT mean the beach is closed. These beach water advisories alert the public of a possible risk of illness associated with water contact in the advisory areas. The Health Department recommends you do not swim or wade in the water in the areas under advisory. Fish and other seafood caught from these areas should be thoroughly washed with fresh water and thoroughly cooked before eating, as should fish or seafood caught from any waters.

The areas will be re-tested this week, and the advisories will be lifted when the bacteria levels meet the EPA's recommended standards. For more information about beach water testing, go to GaCHD.org and click on the Environmental Health tab at the top of the page.
