

# Water

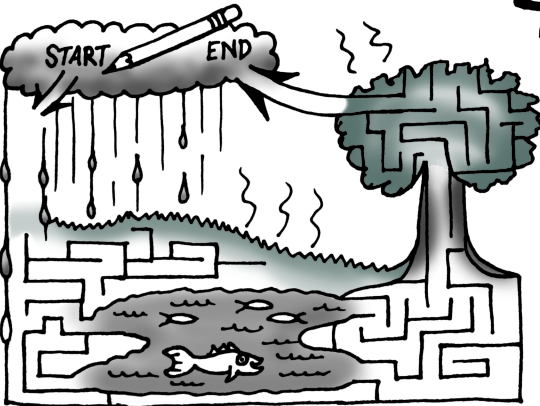

Where does water come from?

That's easy!  
My sink!

Hmmmm...it's really not THAT easy JR Rangers! Water comes from rain or snow. And did you know that water doesn't just make a one way trip down from the clouds? It travels in a circle.

Follow the water to see where it goes.

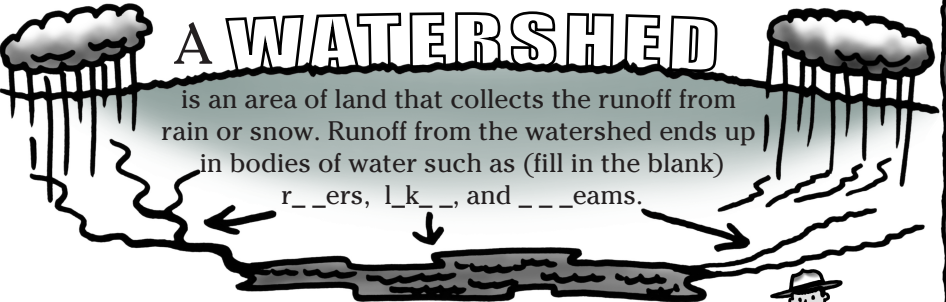

**WOW**  
Nature Recycles!

Next time you drink a glass of water, you might be surprised to learn scientists think that glass of water has been recycled for millions of years (even before dinosaurs!)

## A WATERSHED

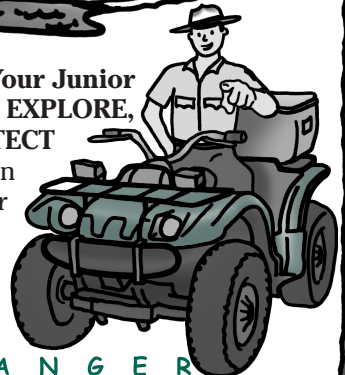

is an area of land that collects the runoff from rain or snow. Runoff from the watershed ends up in bodies of water such as (fill in the blank) r\_ \_ers, l\_k\_ \_ , and \_ \_ \_eams.

### MISSION

Go to a body of water found on this site and, on a field notes page, draw or list as many living things as you see.

**REMEMBER!** Your Junior Ranger Mission is to **EXPLORE, RESPECT, and PROTECT** soooooooo... How can YOU help to keep our water sources clean for the next million years?
